

Cingal®

Combination Hyaluronic Acid + Steroid Single Injection

Medical Information Brochure

Structured product education for osteoarthritis pain management, designed for the Platinum Pharma website brochure download section.

Single injection

Fast relief from Week 1*

Up to 6 months†

Cingal® combines rapid anti-inflammatory action with viscosupplement support to help relieve pain and improve mobility.

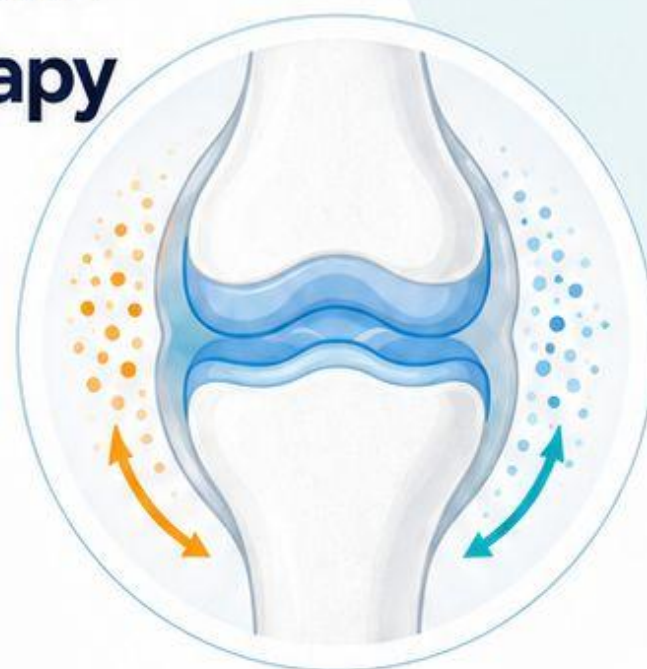

Product overview: Cingal® is a single intra-articular injection combining hyaluronic acid and triamcinolone hexacetonide, designed to help relieve symptoms of osteoarthritis of the knee by providing rapid short-term pain relief and sustained viscosupplement support. Claims and indication details should be verified against the Egypt-approved IFU and local registration documents before publication.

*Rapid relief claim is based on cited source materials and should be checked against local labeling before publication.

†Pain relief duration and clinical claims must be verified against the Egypt-approved IFU and local registration documents before publication.

Understanding osteoarthritis and combination injection therapy

A healthy knee contains synovial fluid that lubricates and absorbs shocks. In osteoarthritis, changes in synovial fluid and degeneration of joint structures may contribute to pain, stiffness, reduced mobility, and ongoing discomfort. Cingal combines hyaluronic acid support with anti-inflammatory corticosteroid action to help relieve symptoms of osteoarthritis of the knee.

1 Rapid anti-inflammatory action

The corticosteroid component is intended to help provide fast symptom relief.

2 Lubrication and cushioning

The HA viscosupplement component helps improve lubrication and mechanical support in the joint.

3 Single-injection convenience

Cingal is designed as a one-injection treatment option within the approved labeling.

What is Cingal®?

Cingal® is a sterile, viscoelastic preparation combining lightly cross-linked sodium hyaluronate with triamcinolone hexacetonide in a single-use syringe, used for osteoarthritis-related knee pain according to the applicable regional approval.

Recommended website brief

Cingal® is a single-injection combination hyaluronic acid and corticosteroid treatment designed to help relieve symptoms of osteoarthritis of the knee by providing rapid anti-inflammatory pain relief together with viscosupplement support. It is administered by a qualified healthcare professional as a single intra-articular injection, according to approved product labeling and local registration.

Product facts and administration

Key product facts

- Category: hyaluronic acid viscosupplement + corticosteroid combination.
- Composition: lightly cross-linked sodium hyaluronate with triamcinolone hexacetonide.
- Presentation: sterile viscoelastic preparation in a single-use syringe.
- Intended use: symptomatic osteoarthritis knee pain relief according to local approval.
- Source: non-animal based HA produced by bacterial fermentation.
- Treatment concept: combines viscosupplementation with rapid anti-inflammatory action.

Administration summary

- Single intra-articular injection into the selected knee joint space.
- Administered by a qualified healthcare professional using strict aseptic technique.
- Remove joint effusion, if present, before injection.
- Product selection and suitability should follow the approved IFU and physician judgment.
- Post-procedure monitoring and patient counseling should follow local practice.

Single injection

Post-injection patient advice

As with any invasive joint procedure, patients are advised to avoid strenuous activity or prolonged weight-bearing activity, such as running or tennis, within 48 hours after the intra-articular injection. Patients should follow their treating physician's instructions.

Evidence highlights and safety

Clinical evidence summary

Official Cingal website and brochure materials describe rapid relief from Week 1 and sustained osteoarthritis knee pain relief lasting up to 6 months after a single intra-articular injection.

[†]Duration of effect is individual and subject to clinical response, local labeling, and medical approval.

Fast early relief

Cingal materials describe significant improvement from Week 1.

Long-lasting relief

Pain relief may continue up to 6 months, subject to local labeling and medical approval.

Combination treatment

Cingal combines HA viscosupplementation with corticosteroid action in a single injection.

Essential safety and suitability notes

Do not administer to patients with known hypersensitivity to hyaluronate preparations or in joints with infection or skin disease at the injection site. Transient pain, swelling, or injection-site reactions may occur after intra-articular injection. Cingal® should be injected only by medical professionals trained in accepted intra-articular injection technique. Final publication should be checked against the Egypt-approved IFU and local registration file.
